Why   ?

What are Git and Github?

Collaborative version control system

What is a version control system?

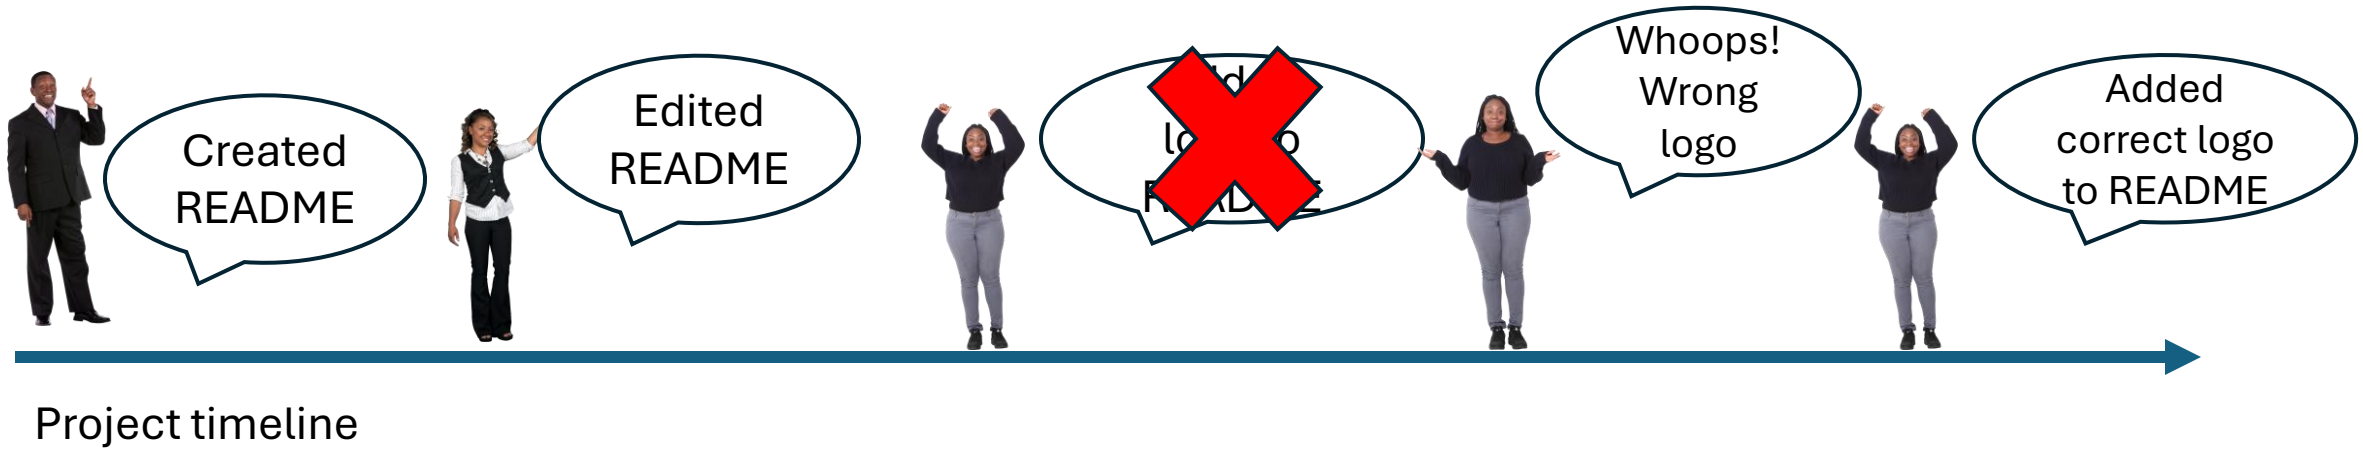

- Tracks changes to a project: *What, who, when, why*
- Allows earlier versions to be recovered
- Allows collaborative changes to files

Why use a version control system?

- Helps team members work independently together
- Tells you who did what when
- You can revert to a previous version if something goes wrong

Your most important collaborator may be future you!

What are Git and Github?

- Version control software installed on your computer
- Free and open-source

- Cloud-based collaboration platform that works with Git
- Free-to-use with paid upgrades

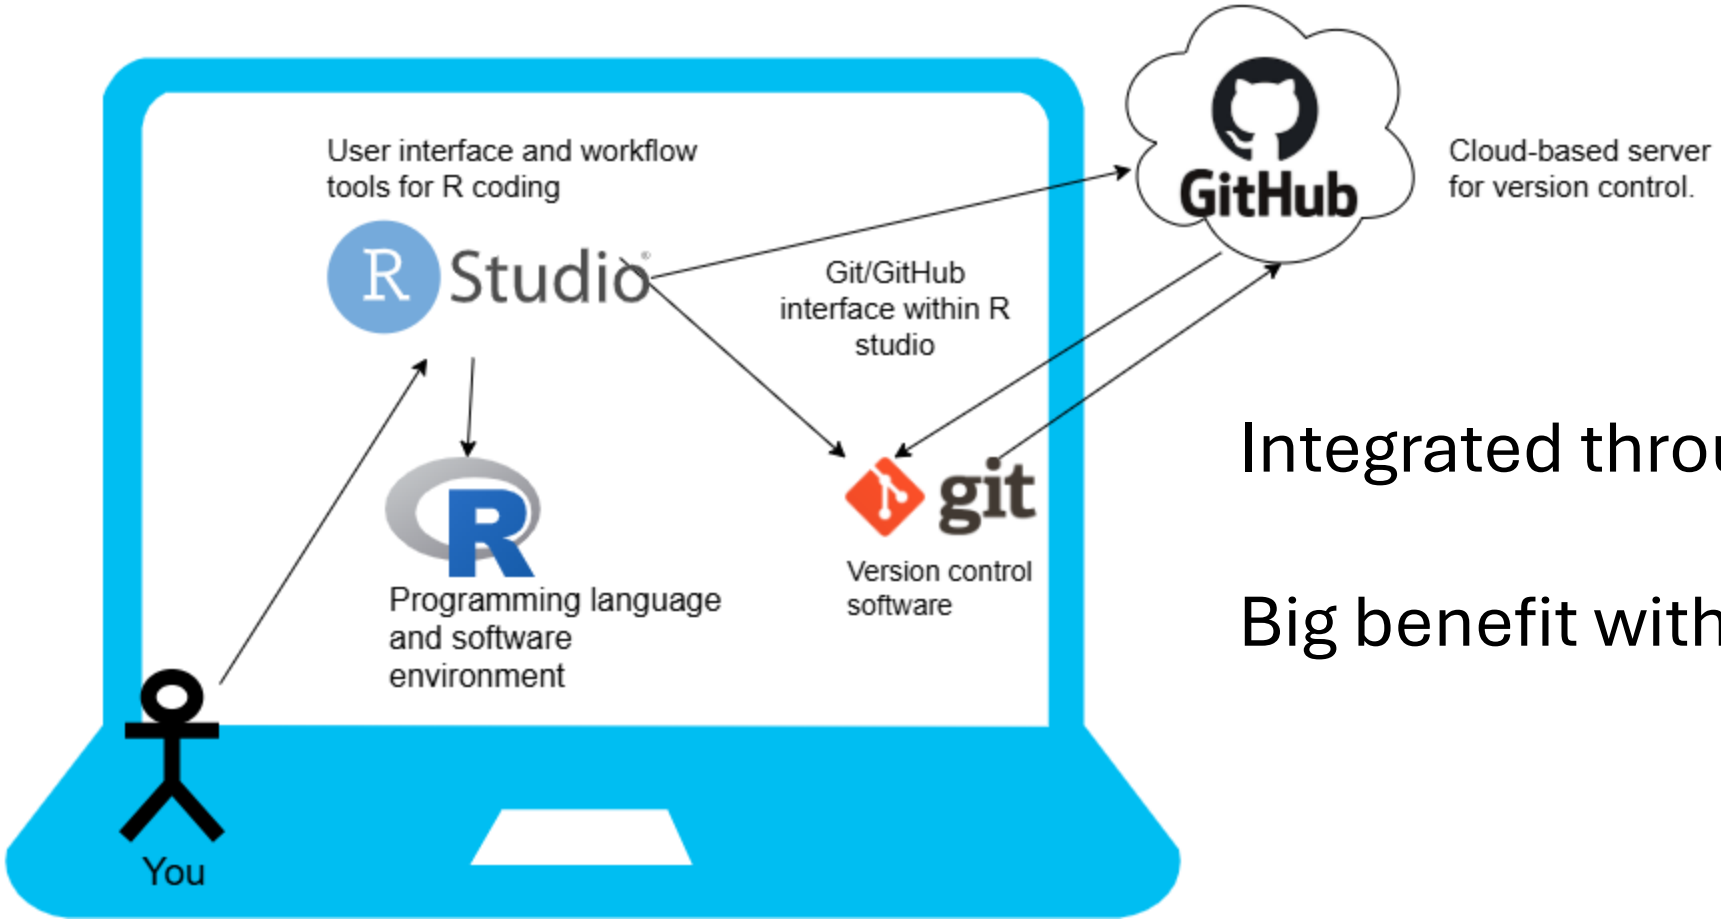

Why use Git and Github?

- Free to use
- Lightweight
- User-friendly
- Lots of educational resources https://docs.github.com/en
- Widely used

How do Git and Github fit with R and R studio?

Integrated through RStudio

Big benefit with minimal effort

Necessary jargon

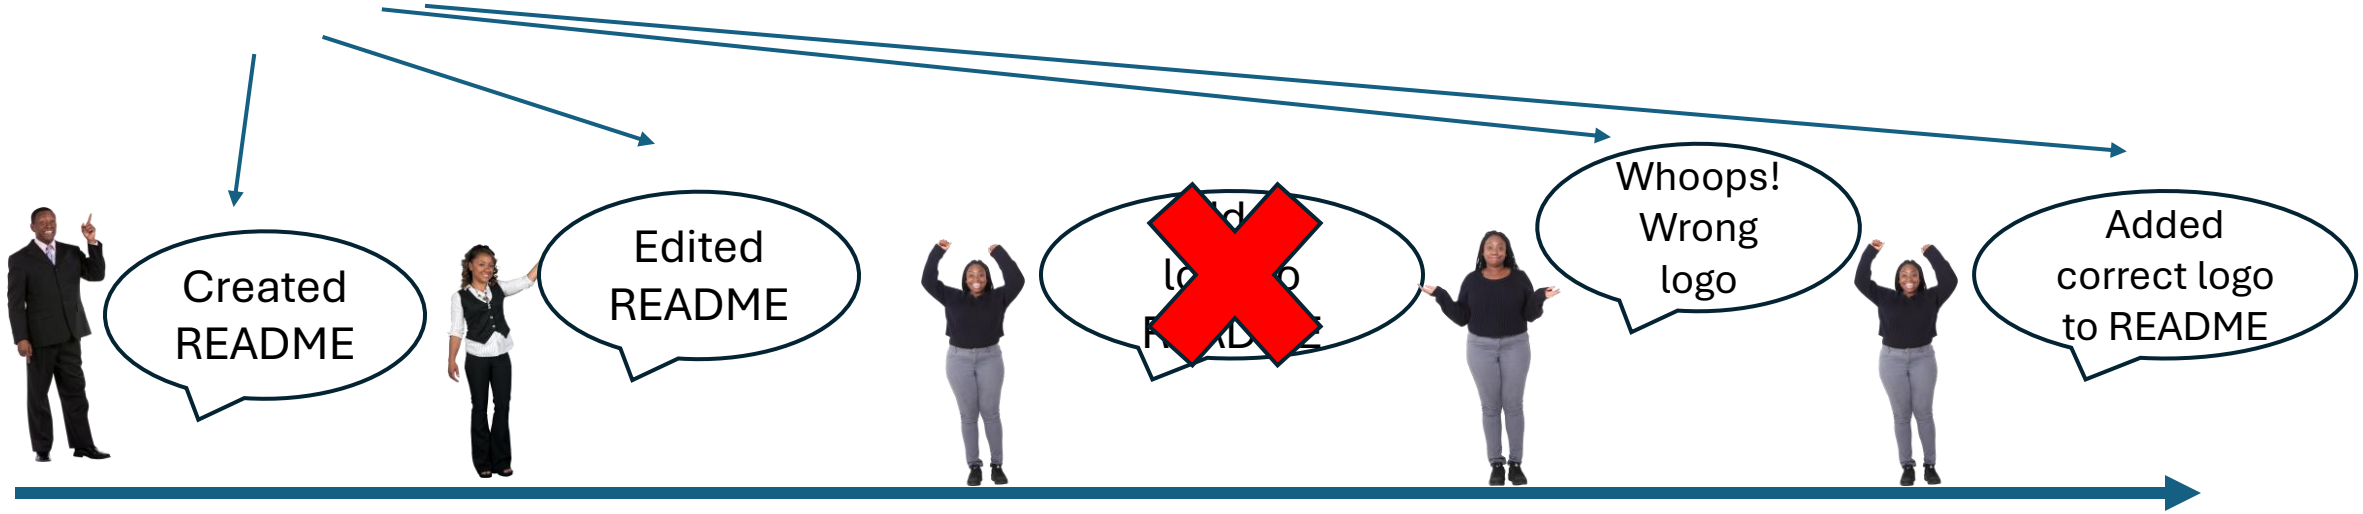

https://docs.github.com/en/get-started/learning-about-github/github-glossary

Repository: A collection of files and folders for a project

Local: C:/Documents/myrepository ⟷ **Remote**: https:github.com/myusername/myrepository

git

Commit: A record of any change to the repository*

Project timeline

Next steps

- Set up Git and Github with RStudio

- Practice a version control workflow in RStudio
