* Model → linear / logistic.
* Prior
* Likelihood
* Posterior
* Density
* mean & ~~variance~~ std error
* Histogram.
* ~~Monte Carlo method~~
* ~~Sampling~~

* probability (Axioms)
* condit. prob.

vs expectation & std dev.

* statistical error (ε)
Modely uncertainty
(root on β)

---

*After the math example with unregularized

trick: β prior ~ N

* conjugacy → avgs
* ↑ Monte Carlo
* ↓ sampling

* posterior predictive distr of ~~[redacted]~~ response
* sample from this ↑ using MC.
